PRODUCT DESIGN DOCUMENTATION

Payana Mitra

Website Colour Schemes,
Realtime Colors References and UI Implementation Guide

3 COLOUR DIRECTIONS	REALTIME COLORS
same UX • same typography • different visual identity	clickable palette links + implementation reference

Three website colour directions
This document compares Heritage Forest, Desert Heritage and Forest + Ocean using the same Payana website UX. Each direction contains its exact HEX tokens, intended UI usage and a direct Realtime Colors link.

Source reference
The document structure, spacing language, section bars, tables, decision boxes, information boxes and footer treatment follow the supplied Payana Mitra MVP documentation style.

Prepared for the Payana Mitra MVP Team • September 2026

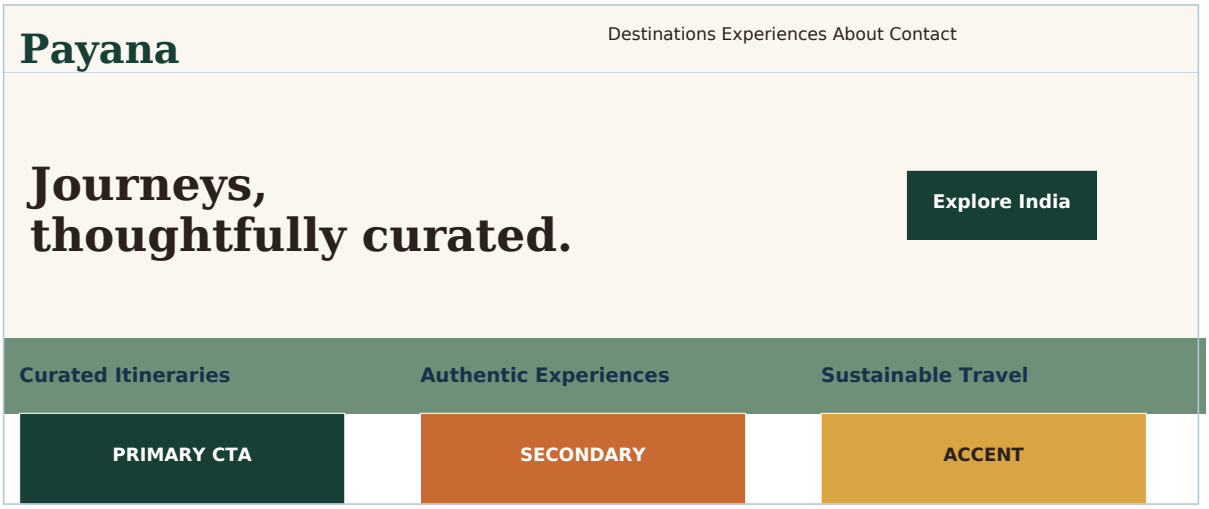

01 Colour Scheme Overview

Three options are intentionally kept within the same product system so the team can compare brand expression without changing the UX architecture.

Scheme	Text	Background	Primary	Secondary	Accent
Heritage Forest	#2B211B	#FAF7F0	#173F35	#C96A32	#D9A441
Desert Heritage	#292522	#FBF3E3	#3A2418	#B85C38	#D49A32
Forest + Ocean	#202B27	#F7F5EE	#164A3A	#357A8A	#D4773C

01 Heritage Forest

Natural • Authentic • Premium — The strongest visual connection to the existing Payana logo. Forest green provides a calm structural base, while terracotta and heritage gold add warmth and cultural character.

Preview note
The visual preview above is a document-ready reconstruction using the exact palette values from the linked Realtime Colors URL. The live Realtime Colors page is linked directly below so the team can inspect the interactive version.

02 Desert Heritage

Royal • Warm • Cultural — A warmer, more traditional interpretation inspired by Indian architecture, desert landscapes and royal destinations.

03 Forest + Ocean

Fresh • Modern • Travel-Tech — A contemporary travel-tech direction combining deep green, coastal blue and a warm orange accent.

05 **Website Implementation**

Shared visual system

Headings: DM Serif Display Body/UI: Inter Cards: 16–20 px radius Shadows: subtle Layout: mobile-first and responsive

UI area	Implementation rule
Navbar	Use the primary colour for structure; keep the Payana logo unchanged.
Hero	Use large destination photography with a strong serif heading and one dominant CTA.
Primary CTA	Use the primary colour for the most important action.
Secondary CTA	Use a light surface, outline or secondary brand colour.
Destination cards	Keep photography dominant; use colour mainly for text, labels and action icons.
Trip / itinerary	Use the primary colour for structure and accent colour for current activity.
Map	Keep the base map neutral; reserve brand colours for routes, markers and live position.
AI Guide	Use the accent or secondary colour sparingly to distinguish intelligent features.
Offline state	Use a soft branded surface rather than an aggressive red error treatment.
Admin panel	Reduce decorative colour; prioritize readability, tables and operational actions.

Prototype rule
Build the same Home, Destination, Trip/Itinerary, Map, AI Guide and Admin Dashboard screens with all three palettes. Do not change layout or UX between versions.

Design-token recommendation
Store each palette as CSS/Tailwind variables so the team can switch themes without rewriting components. Realtime Colors also supports exporting palettes for CSS and Tailwind, which can be used as the starting point for implementation.

06 Final Comparison

Criteria	Heritage Forest	Desert Heritage	Forest + Ocean
Brand connection	Very strong	Strong	Strong
Heritage feeling	High	Very high	Medium
Modern digital feel	High	Medium	Very high
Nature / sustainability	Very high	Medium	High
Travel photography	Warm + earthy	Warm + royal	Fresh + coastal
Primary visual mood	Calm / authentic	Cultural / warm	Modern / fresh

Selection process
Use the three linked Realtime Colors previews to review the same website screens. After the team agrees on a direction, freeze the corresponding HEX tokens as the Payana Mitra website design system.
